Jonathan Woo

Education

University of California, Los Angeles August 2025 — June 2030 (anticipated)
Doctor of Philosophy in Mathematics

University of California, Los Angeles September 2020 — August 2024
Bachelor of Science in Mathematics of Computation

Posters and Presentations

Gravity-driven Particle-laden Free Surface Flow - A Comparison of Models May 2024
UCLA Undergraduate Research and Creativity Showcase

- Presented comparisons between a diffusive flux model and suspension balance model in the context of thin-films.
- Numerical simulation data from each model reveal that both models agree well with experimental data and that the two models minimally differ from each other.

Phase transitions in highly concentrated particle-liquid thin films November 2023
76th Annual Meeting of the Divison of Fluid Dynamics

- Experimentally investigated phenomenon in gravity-driven particle-laden flows down an incline where liquid-particle suspensions transition from fluid-like behavior to solid-like behavior.
- Discovered quantitative dependence of front speed and fluid layer thickness on parameters such as the inclination angle, particle diameter, particle volume fraction, densities, and viscosity.

Modeling polydisperse particle-laden flow down an incline November 2023
76th Annual Meeting of the Divison of Fluid Dynamics

- Modelled behavior of particle-laden flows with finitely many particle species of differing size as well as a continuous distribution of particle sizes.
- Developed model consisting of a system of hyperbolic conservation laws whose fluxes were determined by an auxiliary ordinary differential equation system (for the finite species case) or an integro-differential equation (for the continuous size distribution case).
- Numerically simulated and performed comparisons between physical experimental data and numerical data.

Research Experience

Undergraduate Researcher
UCLA Computational and Applied Mathematics REU June 2023 — August 2023
Mentors: Andrea Bertozzi, Sarah Burnett, Lingyun Ding

- Studied gravity-driven particle-laden viscous thin-films down an incline through physical experiments, computational simulations, data analysis, and theoretical exploration.
- Explored and compared continuum models for transport of particles and liquid derived from a diffusive flux model and a suspension balance model

Projects

Computer Graphics Class Project October 2022 — December 2022
Department of Computer Science, UCLA

- With two other group members, built an interactive computer graphics demonstration found at https://bruinkart.glitch.me/.
- Implemented 3D graphics with lighting, shading, models, and physics in JavaScript.

Work Experience

Math Tutor
Mathanisum Learning Center January 2025 — July 2025

- Provided exceptional instruction/tutoring services to students.
- Evaluate and correct student work and homework.
- Interact and motivate students.
- Work collaboratively with team members to deliver the best learning experience for students.

PIC Lab Assistant
UCLA Programming in Computing Lab September 2023 — June 2024

- Maintained proper operations of computing lab through cleaning, organizing, and assisting.
- Assisted lab patrons in troubleshooting and programming.
