Additional comments

Please describe one or two specific things that the TA does that help you learn in this course.

7 responses

He is good at verbally explaining things.

He has clear explanations about specific hw problems

He does a great job of going over all of his answers in section, then posting solutions afterwards.

He explains what he's doing and why he's doing it

Helped me understand derivatives better.

I like that he solves the problem first then goes over it.

Recaps the week's lectures thoroughly and answers any questions giving students enough time to understand.

Please describe one or two specific things that the TA can do better to help you succeed in this course.

6 responses

N/A

Spend time reviewing the concepts/lessons we learned the previous week

We go over topics not yet covered in lecture, which I do not feel is useful as I just sit there confused.

If anything just writing a bit clearer

Maybe have example problems ready as review from the week's lectures instead of just telling us to meet in groups when nobody has questions.

Go through more examples together instead of just working on the discussion worksheets on our own and spend more time on going over everything from lectures.
